PERSONAL VIEW

The sins of expertness and a proposal for redemption

Two decades ago I was an expert on the subject of compliance with therapeutic regimens. I enjoyed the topic enormously, lectured internationally on it, had my opinion sought by other researchers and research institutes, and my colleagues and I ran international compliance symposiums and wrote two books, chapters for several others, and dozens of papers about it. Whether at a meeting or in print, I was always given the last word on the matter.

It then dawned on me that experts like me commit two sins that retard the advance of science and harm the young. Firstly, adding our prestige to our opinions gives the latter far greater persuasive power

an expert in an old field with a new name: evidence based medicine. Because interest in these ideas was so great, especially among young clinicians around the world, my writing and editing was published in several languages, and when I was not running a clinical service I was out of town demonstrating evidence based medicine at the bedside and lecturing about it (over 100 times in 1998).

Although acceptance of my views was not universal, once again my conclusions came to be given too much credence and my opinions too much weight. And newcomers to the field who regarded me with affection faced an additional deterrent to challeng-

There are still far more experts around than is healthy

David L Sackett *director, Trout Research and Education Centre at Irish Lake, Markdale, Ontario, Canada*

It then dawned on me that experts like me commit two sins that retard the advance of science and harm the young.

As before, I decided to get out of the way of the young people now entering this field,

Progress in evidence-based medicine: a quarter century on

Benjamin Djulbegovic, Gordon H Guyatt

In response to limitations in the understanding and use of published evidence, evidence-based medicine (EBM) began as a movement in the early 1990s. EBM's initial focus was on educating clinicians in the understanding and use of published literature to optimise clinical care, including the science of systematic reviews. EBM progressed to recognise limitations of evidence alone, and has increasingly stressed the need to combine critical appraisal of the evidence with patient's values and preferences through shared decision making. In another progress, EBM incorporated and further developed the science of producing trustworthy clinical practice guidelines pioneered by investigators in the 1980s. EBM's enduring contributions to clinical medicine include placing the practice of medicine on a solid scientific basis, the development of more sophisticated hierarchies of evidence, the recognition of the crucial role of patient values and preferences in clinical decision making, and the development of the methodology for generating trustworthy recommendations.

10th Conference of the International Society for EBHC
Taormina, 25th - 28th October 2023
#EBHC2023

GIMBE
EVIDENCE FOR HEALTH

Evidence Generation

- Extending both WHO statement and ICMJE policies concerning clinical trials to register observational studies
- Exploring ways to reduce the extreme fragmentation of regulation issues
- Exploiting all opportunities to increase the reproducibility of biomedical research
- We STILL need less publications and more high-quality evidence

THE ECOSYSTEM
OF EVIDENCE

Lessons learned in the pandemic
era and future challenges

10th International Conference for EBHC Teachers and Developers
10th Conference of the International Society for EBHC
Taormina, 25th - 28th October 2023
#EBHC2023

GIMBE
EVIDENCE FOR HEALTH

Evidence Generation

- Complex interventions and complex systems need more flexible methods
- Need to provide similar opportunities to those in high-income countries for clinical trial research in low-income regions
- Observational and real-world evidence are underrepresented
- Need for structures and incentives to enable faster data sharing of anonymised datasets
- Scientific integrity is still a key issue

THE ECOSYSTEM
OF EVIDENCE

Lessons learned in the pandemic
era and future challenges

10th International Conference for EBHC Teachers and Developers
10th Conference of the International Society for EBHC
Taormina, 25th - 28th October 2023
#EBHC2023

GIMBE
EVIDENCE FOR HEALTH

Evidence Synthesis

- Cochrane handbooks
- Reporting guidelines (PRISMA, AGREE-II, RIGHT, ...)
- GRADE method
- International efforts to help researchers and meta-researchers (e.g. PragMeta, Systematic Reviewlution)
- International standards: G-I-N, AGREE II, IOM
- New ways of working, and sharing high-quality evidence (e.g. MAGICapp)

THE ECOSYSTEM
OF EVIDENCE

Lessons learned in the pandemic
era and future challenges

10th International Conference for EBHC Teachers and Developers
10th Conference of the International Society for EBHC
Taormina, 25th - 28th October 2023
#EBHC2023

GIMBE
EVIDENCE FOR HEALTH

SYSTEMATIC REVIEWS

- International policies to converge efforts on Cochrane reviews
- Extend the ICMJE recommendations on registration number mandatory for publication to systematic reviews
- Centralized database for (non Cochrane) high-quality systematic reviews

Evidence Synthesis

CLINICAL PRACTICE GUIDELINES

- International governance to avoid proliferation of low quality CPGs
- Better management of COIs according to G-I-N standards
- Central CPGs database searchable for quality criteria (AGREE II, G-I-N, IOM)

THE ECOSYSTEM
OF EVIDENCE

Lessons learned in the pandemic
era and future challenges

10th International Conference for EBHC Teachers and Developers
10th Conference of the International Society for EBHC
Taormina, 25th - 28th October 2023
#EBHC2023

GIMBE
EVIDENCE FOR HEALTH

Evidence Synthesis

- Traditional methods are not effective in rapidly collating, assessing, and synthesising evidence to inform decision-making
- Duplication of systematic reviews
- Funding (much of the work is being undertaken by crowdsourcing and volunteers)
- Increase the reliability of alternative methodologies (rapid and living reviews)
- Foster use of artificial intelligence/machine learning

THE ECOSYSTEM
OF EVIDENCE

GIMBE
EVIDENCE FOR HEALTH

Evidence Translation

- The pandemic has largely contributed to health inequalities
- New evidence is often overwhelming and difficult to keep up with, particularly for low/middle income countries
- Evidence is often conflicting or lacking consensus, or inadequate to inform in-country measures
- A gap still persists between evidence-informed decision-making and policymakers' decisions
- Lack of transparency surrounding the process for how decisions are ultimately made
